

Draft beer control system

A counting system for draft beer will allow you ...

1. **Measure** your **real cost of sales** at all times.
2. To verify that the **sales revenues** correspond to the **quantity served**.
3. Evaluate and **monitor employee performance** in serving beer and ordering glasses served in the POS system.
4. To be **proactive in identifying, and solving problems** of waste, overfilling and loss of income as soon as they arise.

A manager equipped with our control system will have the ability to **define and maintain the highest profit margin possible** in draft beer sales for his business!

Our draft beer management system will make a considerable difference on your bottom line!

How it works:

Flow meter:

The Auper draft beer flow meter is mounted in the **beer tube going to the tap** from the keg. As soon as the beer flows, the flowmeter generates a **train of pulses proportional in frequency to the speed** of the liquid passing through it.

Counting system:

This is the device to which the **flow meters will be connected**. It converts the pulses sent by the flowmeters and **counts the quantity served in ounces or in liters** (or other). The metering system you need is selected based on the number of flow meters you will connect to it. The system is calibrated with the flow meter and the beer it measures to provide the most accurate measurements possible.

Manual control:

You can **read the quantity served on the screen** and reset the counters when you are finished to start a new period. If you want a hard copy of the meters, you can **print a report on a serial printer**. The comparison with your sales report is done manually.

Software control:

The Draft Manager Live software will automatically **record the glasses of beer served** and the **glasses ordered in the POS system** in real time. The glasses served and ordered at the POS are **time stamped** and the amounts are **reconciled before your eyes**. Reports are printed and automatically emailed to you at the end of each shift. This system will help you to **differentiate waste and overfilling from glasses served not ordered**.

Auper draft beer flow meter

TM600: 1 to 6 beer taps

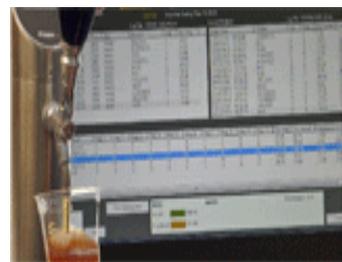

Automatic Draft Tap

2FM: 1 or 2 beer taps Battery powered

TMB400: 1 to 64 beer taps
